# How to turn jpg file into pdf

The process illustrated above entails the conversion of one image to JPG. If you're wondering if we can convert images in bulk—check out our Pro bundles. The paid option allows you to drag and drop as many images to convert to JPG as you'd like. You also get full access to 20+ other useful tools to manage common image and digital document formats. Whoa. What Can't You Do? We're not going to lie; as seamless as our tools might be, there are a few limitations for you to consider. The file size limit is 5GB per file, and without an account, you can only convert files one at a time. But other than that, there's not much to fret. As a platform floating on the cloud, you can conveniently access the image converter to JPG on just about any machine. On Mac, Windows, your handheld mobile phone, or even a tablet. What About JPEG? Essentially, the JPEG and JPG formats are the same, following the guidelines of the Joint Photographic Experts Group. The only difference goes back to older versions of Windows machines, where file extensions were limited to having three letters, so the 'E' in JPEG was initially omitted, making it 'JPG.' Any platform or individuals that require you to send or share files as JPEG images should naturally accept JPG as well. If this is ever an issue and you need to send a file in JPG format specifically, check out our tutorial on converting JPEG to JPG. Keep an eye on the Smallpdf blog for guides to help you with all your PDF and JPG struggles. But for now—happy converting! OnlineConvertFree converts your images for free. Convert your jpg to jpeg online with no software to install. How to convert jpeg to jpg? Step 1 Select jpg file, which you want to convert, from your computer, Google Drive, Dropbox or drag and drop it on the page. Step 2 Select jpeg or any other format, which you want to convert. Step 3 Wait till your conversion process will be completed and click download converted jpeg file. Fast and easy! Just drop your jpg files on the page to convert jpeg or you can convert it to more than 250 different file formats without registration, giving an email or watermark. Don't worry about security. We delete uploaded jpg files instantly and converted jpeg files after 24 hours. All files transfer with secured an advanced level of SSL encryption. All in the cloud! You don't need to install any software. All jpg to jpeg conversions make in the cloud and don't use any resources of your computer. Joint Photographic Experts Group JFIF format Joint Photographic Experts Group Page 2 You can convert 7z archive to zip as well as to variety of other formats with free online converter. How to convert zip to 7z? Step 1 Select 7z file, which you want to convert, from your computer, Google Drive, Dropbox or drag and drop it on the page. Step 2 Select zip or any other format, which you want to convert. Step 3 Wait till your conversion process will be completed and click download converted zip file. Fast and easy! Just drop your 7z files on the page to convert zip or you can convert it to more than 250 different file formats without registration, giving an email or watermark. Don't worry about security. We delete uploaded 7z files instantly and converted zip files after 24 hours. All files transfer with secured an advanced level of SSL encryption. All in the cloud! You don't need to install any software. All 7z to zip conversions make in the cloud and don't use any resources of your computer. 7z compressed archive ZIP compression This article explains what JPG and JPEG files are and how they're different than other image formats, how to open one, and which programs can convert one to a different image format such as SVG, GIF, or PNG. A JPG or JPEG file (both pronounced "jay-peg") is an image file. While some JPG image files use the JPG file extension and others use JPEG, they are both the same type of file. Some JPEG image files use the JPE file extension, but that's not very common. JFIF files are JPEG File Interchange Format files that also use JPEG compression, but they aren't as popular as JPG files. JPG files are supported by all image viewers and editors. It's the most widely accepted image format. You can open JPG files with your web browser, like Chrome or Firefox (drag local JPG files onto the browser window), and built-in Microsoft programs like the photo viewer and Paint application. If you're on a Mac, Apple Preview and Apple Photos can open the JPG file. JPG files are widely used because the compression algorithm significantly reduces the size of the file, which makes it ideal for sharing, storing, and displaying on websites. However, this JPG compression also reduces the quality of the image, which might be noticeable if it's highly compressed. IrfanView, Adobe Photoshop, GIMP, and basically any other program that views images, including online services such as Google Drive, support JPG files, too. Mobile devices provide support for opening JPG files as well, which means you can view them in your email and through text messages without needing a specific JPG viewing app. Some websites and programs might not recognize an image as a JPEG image file unless it has the proper file extension. For example, some basic image editors and viewers will only open JPG files and will not know that the JPEG file you have is the same thing. In those instances, you can just rename the file to have the file extension that the program understands. There are two main ways to convert JPG files. You can either use the image viewer or editor to save it to a new format (assuming that function is supported) or plug the JPG file into an image converter program. For example, FileZigZag is an online JPG converter that can save the file to a number of other formats, including PNG, TIF/TIFF, GIF, BMP, DPX, TGA, PCX, and YUV. Another really simple option is an application called Resizing.app, and there's a Chrome extension if you plan to perform lots of conversions. Output formats include PNG, TIFF, WEBP, and BMP. You can even convert JPG files to an MS Word format like DOCX or DOC with Zamzar, which is like FileZigZag in that it converts the JPG file online. It also saves JPG to ICO, PS, PDF, and WEBP, among other formats. If you just want to insert a JPG file into a Word document, you don't have to convert the file to an MS Word file format. In fact, a conversion like that doesn't make for a very well-formatted document. Instead, use Word's built-in "insert" option to plug the JPG directly into the document even if you already have text in there. Open the JPG file in Microsoft Paint and use the File > Save as menu to convert it to BMP, DIB, PNG, TIFF, etc. The other JPG viewers and editors mentioned above support similar menu options and output file formats. Using the Convertio website is one way to convert JPG to EPS if you want the image file to be in that format. If that doesn't work, you can try AConvert.com. Some file formats use file extensions that look like .JPG files but are in fact unrelated. Examples include JPR (Builder Project or Fugawi Projection), JPS (Stereo JPEG Image or Akeeba Backup Archive), and JPGW (JPEG World). So, is there any difference between JPEG and JPG? The file formats are identical, but one has an extra letter. Really, that's the only difference. Both JPG and JPEG represent an image format supported by the Joint Photographic Experts Group and have the exact same meaning. The reason for the different file extensions has to do with early versions of Windows not accepting the longer extension. Like HTM and HTML files, when the JPEG format was first introduced, the official file extension was JPEG (with four letters). However, Windows had a requirement at that time that all file extensions could not exceed three letters, which is why JPG was used for the exact same format. Mac computers, however, didn't have such a limitation. What happened was that both file extensions were used on both systems, and then Windows changed its requirements to accept longer file extensions, but JPG was still being used. Therefore, both JPG and JPEG files circulated and continue to be created. While both file extensions exist, the formats are the exact same and either can be renamed to the other without a loss in functionality. FAQ How do I open a JPG-Large file? JPG-Large files are image files that Google Chrome creates when a Twitter user saves an image by dragging it onto their desktop; they may also be created when a user right-clicks an image on Twitter and then saves it to their desktop. JPG-Large files are in the same format as JPG or JPEG files. Change their file extension by removing "large," and then open the file as you would any JPG or JPEG image. How do I open a damaged JPG or JPEG file? A JPG or JPEG file can become corrupted when there's a system shutdown during file transfer, if something unexpected happens during the sharing process, when a header file gets corrupted, and various other reasons. To open a damaged or corrupted JPG or JPEG file, try changing the file format, then see if this solves the problem. You can also try opening the damaged JPEG in a program like Paint, then saving the image in another file format. Opening the corrupt file in an image editor, such as Photoshop, may also fix the damaged JPEG. How do I open a JPG or JPEG file in Photoshop? To open a JPG or JPEG in Photoshop, go to File > Open, then navigate to the file and double-click to select and open it. Alternatively, you can drag the file from the folder containing it to the Photoshop icon in your dock (macOS) or right-click the file and chose Photoshop from the Open With menu (macOS or PC). Thanks for letting us know! Tell us why!
